(54) WIRELESS COMMUNICATION TERMINAL, SOFTWARE PROVIDING SYSTEM, SOFTWARE UPDATE METHOD, SOFTWARE PROVIDING METHOD, PROGRAM AND RECORDING MEDIUM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a wireless communication terminal that receives an updating software program via a network so as to update its own software program.

SOLUTION: A mobile unit 11 stores a sequence software program. When the mobile unit 11 transmits version information of the sequence software program to a software management center 41, the software management center 41 compares the version information with version information of an update module managed by the center 41 and guides the mobile unit 11 for the update. The mobile unit 11 downloads the update module and can update its own sequence software program on the basis of the updating module.
